Set up GitHub Copilot

Use GitHub's AI pair programmer to autocomplete suggestions as you code.

[Get started with GitHub Copilot](#)

Add collaborators to this repository

Search for people using their GitHub username or email address.

[Invite collaborators](#)

Quick setup — if you've done this kind of thing before

[Set up in Desktop](#)

or

[HTTPS](#)[SSH](#)<https://github.com/kvasco>

Get started by [creating a new file](#) or [uploading an existing file](#). We recommend every repository include a [README](#), [LICENSE](#), and [.gitignore](#).

...or create a new repository on the command line

```
echo "# triage_tools" >> README.md  
git init
```

```
git add README.md
git commit -m "first commit"
git branch -M main
git remote add origin https://github.com/kvasco/triage_tools.ξ
git push -u origin main
```

...or push an existing repository from the command line

```
git remote add origin https://github.com/kvasco/triage_tools.ξ
git branch -M main
git push -u origin main
```

...or import code from another repository

You can initialize this repository with code from a Subversion, Mercurial, or TFS project.
